FOR IMMEDIATE RELEASE

Fischer Identity on AWS

Fischer Identity has joined the AWS Partner Network as a Public Sector Partner

January 2023 | Naples, FL - Fischer Identity, a Zero Trust Identity Governance and Access Management (IAM) solution provider, today announced it joined the Amazon Web Services (AWS) Partner Network (APN) as an AWS Public Sector Partner. Fischer Identity also announced it passed an AWS Foundational Technical Review (FTR) for the Fischer Identity Solution, validating it meets the best practice standards for security, reliability, and operational excellence. As an APN member, Fischer Identity is uniquely positioned to help customers take full advantage of all that AWS has to offer and accelerate their journey to the cloud. Its membership will help enable Fischer customers to adopt cloud identity management solutions and continue to drive some of the most successful IAM engagements in the industry. Along with Fischer's global adoption of AWS for all cloud customers, the company will focus on continued vertical growth to expand the reach of its IAM solutions. Fischer is using AWS to help its customers support growing cloud infrastructure demand.

"It is exciting to see AWS continue to invest in its partners with program offerings that can place Fischer Identity into the hands of consumers that need Identity most. Far too long, the concept of an enterprise Identity program was beyond the realm of possibility for small to medium sized businesses. The Identity industry had simply forgotten about the realities of affordability of such essential software. By partnering with AWS, Fischer Identity is in a position where our purpose-built and cost-effective approach to Identity can reach these underserved and unprotected businesses without wreaking havoc on their budgets," stated Dan Dagnall, President & CEO Fischer Identity.

###

About Fischer Identity: Fischer Identity simplifies, accelerates, and automates the complex task of managing identities for on and off premise resources with no limits to scalability or reach, and ensures constant access to innovation. The solution's flexibility enables organizations to drive their identity management objectives and support their Zero Trust initiatives.
